The DE-3000 Configurable Safety Shutdown and Control System uses state-of-the-art microcontrollers and surface-mount PCB assembly technology to provide users of compressors and other critical rotating equipment with a sophisticated, yet reliable, means of protecting and controlling both the prime mover and the load machine (compressor, pump, etc.). Incorporating an “intelligent” add-on board system, the DE-3000 system is fully scalable, allowing users to incorporate a single control system technology across a wide range of applications.

Ease of system setup and configuration sets the DE-3000 apart from other PLC-style or competitive controllers. USB-based connectivity to the device and an intuitive, Windows™-based terminal program for system configuration eliminates the need for any knowledge of ladder-logic or other functional programming languages. ModBus-RTU communications are fully supported for remote monitoring and/or control applications.
DE-3000 Description and Operation

The innovative, CSA-certified DE-3000 control system comprehensively starts, protects, monitors, and controls critical rotating equipment such as reciprocating engines, compressors, and pumps. This scalable and expandable microprocessor-based system includes a Display Module, Power Supply Module and Terminal Module(s). Each device is typically mounted in an associated control panel, with the Display Module installed for simple operator access, and the Power Supply and Terminal Module(s) DIN-rail mounted in the rear of the enclosure.

System Overview

**Display Module** — System operating and application performance information such as engine speed, monitored pressures and temperatures, and the nature of detected alarms and shutdowns is available via a robust, sixteen position, sealed-membrane keypad and 128 x 64-pixel graphics display with multi-color backlighting. The backlight colors will change according to the condition of the engine. The backlight colors are as follows for the given engine conditions:

- **RED:** FAULT / STOP
- **GREEN:** RUNNING
- **YELLOW:** TIMERS ACTIVE
- **PURPLE:** TEST MODE

The display also has a graphing feature instead of a bar graph. Each analog channel (including speed) may be viewed. The graphing screen is updated every minute (which allows the user to see 90 minutes of past data on the screen) and shows the most recent data to the left of the screen. The last data is shown on the far right hand side of the screen. The graphing feature will allow the user to view trending on the panel. System configuration information is stored in non-volatile memory as are the associated system datalogs.

**Power Supply Module** — In addition to conditioning and routing the 12-24 VDC input power, the DE-3000 Power Supply Module also carries up to four (4) industry-standard, 0.6 inch, plug-in digital output modules. These optically-isolated, solid-state devices—including several Altronic-manufactured models—are typically used for on/off control of on-engine processes such as starting motors, fuel, and ignition firing.

**Terminal Module(s)** — All system digital and analog inputs and control outputs are routed through the DE-3000 Terminal Module. Unique to the DE-3000, all system inputs are individually configurable for use as discrete (switch) inputs, thermocouple inputs (J or K), or as analog transducer inputs. The base Terminal Module can be expanded substantially through the use of one of two Expansion Modules.

System Operation

The scalable and expandable nature of the DE-3000 allows it to be used on the simplest safety-shutdown-oriented applications, on mid-range applications with minimal or moderate auto-start or capacity control requirements, and on highly-complex units where a significant number of points must be monitored and functions controlled simultaneously.

**Safety-Shutdown Functions** — At its core, the DE-3000 is an annunciator which directly monitors parameters such as temperatures, pressures, speeds, and vibration levels against a set of pre-set alarm and shutdown thresholds. Once detected, the DE-3000 will take the necessary actions (as configured by the user) to alert the operator and/or shut down the engine by interrupting the flow of fuel and disabling the ignition system.

**Control Functions** — Full auto-start capabilities, including crank-disconnect, are available in the DE-3000. On-board 4-20mA PID control outputs (up to four) and digital outputs (up to 20) offer a range of sophisticated capacity control options.

In a typical operation, the DE-3000 starts and warms-up the engine/compressor, raises it to load-carrying speed, and then automatically applies the load by actuating compressor slide valves or other capacity control devices. Should the control setpoint not be met at the minimum load-carrying speed, the compressor speed is automatically raised in an effort to meet the desired process pressure setpoint. This control strategy is governed by a number of user-adjustable load and speed limits which can inhibit the application of additional load beyond what is deemed to be safe, can force the system to shed load, and can shut the engine/compressor down in the event that a maximum speed is exceeded.

DE Series Data Logging and Communications

The DE Series products are designed to operate in a communications environment. The serial communications interfaces provide the user access to critical data, both locally and from remote locations, allowing predictive scheduled maintenance and/or dispatch of repair personnel with the correct parts. DE units can also initiate a call-out in the event of a fault. ModBus and ASCII protocols are supported.

At the core of the DE Series communications functions are the data logs. These snapshots of data are taken at user-defined intervals and are a compilation of the analog values being monitored by the DE, plus unit speed, status, and complete information on the first fault that caused a system shutdown (identity, value, date, time). Using the Terminal Program, data log information can be downloaded locally to a portable PC or communicated remotely via telephone, satellite or radio. An integral data analysis/trending package that is included with the DE Terminal Software can display and graph this data for inspection and analysis.
System Configuration

The intuitive Terminal Software program operates on a “fill-in-the-blanks” basis whereby the application is not programmed, but configured. Using an application template as a guide, and connecting to a Windows™-based PC via USB connection, the operator selects the appropriate operating parameters and setpoints for each input channel, defines the performance of the digital and analog control outputs, configures the eleven (11) service meters, and establishes the frequency of system datalog sampling and recording. This approach puts application configuration and adjustment into the hands of an educated user by eliminating any complex ladder-logic based programming and revision in the field.

Special DE-3000 System for Use in Class I, Division 1, Group D Hazardous Areas

A special DE-3000 System has been developed for use in hazardous operating areas demanding Class I, Division 1, Group D certification. Using special DE-3000 Terminal Modules and a system Power Supply Module mounted with an integral barrier in an explosion-proof enclosure, this unique system is suitable for new applications requiring this higher level of hazardous area protection. It is also designed for a simple retrofit installation as a replacement for obsolete control systems, or where additional monitoring and/or control functionality is required without downgrading the hazardous area rating of the package.

## To Order

### DISPLAY MODULE
- DE-3000 System .............................................. DE-3000
- Division 1 DE-3000 System .............................. DE-3000-DIV1

### POWER SUPPLY MODULE
- All Standard DE Systems .................................. 691122-1
- Division 1 DE-3000 System (incl. Ex. Box) .......... 691350-1

### TERMINAL MODULE
- DE-3000 System (Standard)
  - First Terminal Module (30 input) ................. 691171-1
  - Second Terminal Module (15 input) ............... 691175-2
  - Second Terminal Module (30 input) ............... 691172-1
- DE-3000 System (Division 1)
  - First Terminal Module (30 input) ................. 691171-3
  - First Terminal Module (15 input) ................. 691175-3

### CABLE ASSEMBLIES
- Display to Terminal Module (DB-25) ................. 693115-1
- Power Supply to Terminal Module (DB-25) .......... 693115-1
  (Standard DE-3000 Systems Only)
- Power Supply to Terminal Module ...................... 693135-1
  (Div. 1 Certified DE-3000 System Only)
- Display Module RS-232 Port (DB-9) .................. 693116-1
- Expansion cable for optional added Terminal modules: 693133-1
  *Use only if Power Supply and Terminal Modules are mounted separately.

### OUTPUT RELAY MODULES (common to all DE systems)
- C.D. Fuel Valve/ignition .................................. 691124
  5-48 Vdc, 5.0 A. ............................................ 691125
  5-60 Vdc, 2.0 A. ............................................ 691056
  5-200 Vdc, 0.67 A. .......................................... 691066
  24-280 Vac, 2.0 A. ......................................... 691065

### Available Altronic Transducers

#### PRESSURE TRANSDUCERS
- 0-15 psia .................................................. 691204-15
- 0-50 psia .................................................. 691204-50
- 0-100 psia ................................................. 691204-100
- 0-300 psia .................................................. 691204-300
- 0-500 psia .................................................. 691204-500
- 0-100 psig/0-680 Kpa ................................... 691201-100
- 0-300 psig/0-2040 Kpa ................................... 691201-300
- 0-500 psig/0-6800 Kpa ................................... 691201-500
- 0-2000 psig/0-136 bar ................................... 691201-2000
- 0-5000 psig/0-340 bar ................................... 691201-5000

#### TEMPERATURE TRANSDUCERS
- Range: +5°F to 350°F / –15°C to 176°C (±3°F / ±2°C)
  - 1.75" length ............................................. 691202-300
  - 5.75" length ............................................. 691203-300
- Range: –40°F to 450°F / –40°C to 232°C (±6°F / ±4°C)
  - 1.75" length ............................................. 691212-450
  - 5.75" length ............................................. 691213-450

#### TRANSDUCER CABLES
- 5 ft. length ............................................... 693008-5
- 25 ft. length ............................................. 693008-25
- 50 ft. length ............................................. 693008-50
