

NO. 35 DATE May 1, 1986  SALES  SERVICE

SUBJECT: PRIMARY COIL BOOT - 502 155

Primary Coil Boot 502 155 is available to completely cover the connections to the primary side of Altronic unshielded coils. The Boot fits the following coils:

- 291 001 - Black Coil
- 501 061 - Blue Coil
- 591 010 - Red Coil

On installation, the primary leads are run through the small inlet hole in the Boot and connected to the coil (+) and (-) using crimped or soldered terminals in the usual manner. The Primary Coil Boot then slides over the entire primary half of the coil up to the mounting bracket.

The 502 155 Boots protect the connection area from moisture, dirt, etc. as well as preventing any possible shock hazard from the primary circuit to engine operators. They also considerably enhance the appearance of unshielded installations.
