

DH-100A SERIES DIGITAL HOURMETER

- Applicable to all engines, motors and processes
- Operates from C.D. ignition, AC or DC power, or magnetic pickup
- Digital LCD readout – easily readable outdoors
- Quartz crystal accuracy and solid-state reliability
- Pushbutton recall of hours when power is off
- 2 models available: resettable and non-resettable

Solid-state digital hourmeters display to 99,999 hours in one-hour increments. They are designed to withstand vibration and give years of continuous service. Power consumption is negligible (microamps), and the hourmeters are applicable to any process. When the power is off, the accumulated count is retained, and the readout can be obtained by depressing the button on the front case.

Two models are available, one allowing the hour count to be preset to any number or reset to zero, and the second model which does not provide for those features. This second version is offered for situations where federal or state-mandated air quality regulations require a non-adjustable means of tracking engine or machine operating hours.

Specifications

Input Voltage..... 8-440V., AC or DC
 Readout Range 0-99,999; 1-hour increment
 Temperature -40°F. to 175°F. / -40°C. to 80°

To Order

Hourmeter with preset/reset features DH-100A
 Hourmeter without preset/reset 691026-2
